

CIS 121 Sequence Problems

Develop an IPO Chart and C++ code the following problems. Upload the IPO and code files to Blackboard.

Save your files with the convention PS2P1, PS2P2 etc. PS1P1 is Problem set 1, program 1 etc.

1. Ask the user to enter first and last name. Display a message "Hello [last name]".

Input	Process	Output
• The user's first name • The user's last name	• Assign the user's first and last name as variable • Plug the last name variable to a statement that will be displayed	• The message "Hello [user's last name]"

2. Allow the user to enter two real numbers. Compute and display the sum of the two numbers.

Input	Process	Output
• The first number • The second number	• Assign variable for the first number • Assign Variable for second number • Add the first and second numbers together while in a statement that will be displayed	• The sum of inputted numbers

3. Ask the user to enter last name and score. Format a message that says "[last name] has a score of [score]".

Input	Process	Output
• User last name • User score	• Assign the user's last name as variable • Assign the user's score as variable • Plug the last name and score variable to a statement that will be displayed	• The message "[user's last name] has a score of [user's score]"

4. Allows the user to enter three integers. Compute the result = $(n1 + n2) * n3$. Display the result.

Input	Process	Output
• Integer 1 • Integer 2 • Integer 3	• Assign Integer 1 as a variable	• The result of the three calculated integer

	• Assign Integer 2 as a variable • Assign Integer 3 as a variable • Calculate the sum of Integer 1 and Integer 2 • Assign the sum as a variable • Multiple Integer 3 to the sum on Integer 1 and 2 • Display the product of the sum and Integer 3	
--	--	--

5. Ask the user to enter two real numbers. Compute and display the sum, product and difference of the numbers.

Input	Process	Output
• Real number 1 • Real number 2	• Assign RN1 as a variable • Assign RN2 as a variable • Calculate the sum of RN1 and RN2 • Assign the sum as variable • Calculate the product of RN1 and RN2 • Assign the product as variable • Calculate the difference of RN1 and RN2 • Assign the difference as variable • Display the variables that clarifies which variable is which	• The sum, product, and difference of the 2 real numbers
